

# *Pilot/Aircrew Cockpit Management System (PACMAN)*

**\*\* Public Briefing \*\***

# ***Position Integrity***

***Situational Awareness***

No military endorsement is expressed or implied in this presentation.

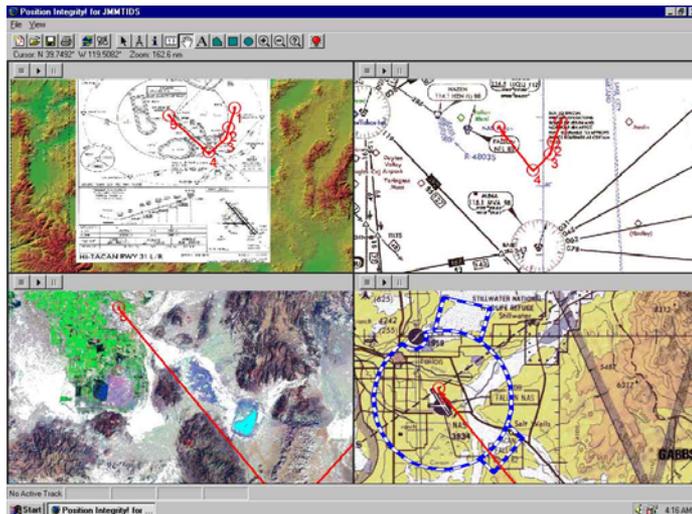

# Who is Position Integrity?

- **Emphasizing 10 years expertise in the aviation industry**
- **An aviation technology company**
  - » Transportation safety technology to save lives
  - » Software applications to maintain situational awareness
  - » Data processing and provisioning services
- **A heritage of defense contracting**
  - » Technology from \$5M of government funding
  - » Current Sponsor is U.S. Military and avionics industry
  - » Applying government research achievements to industry and commerce

# Proven Technology

*Winner of Microsoft Windows World Open*

- Laptop used by co-pilot in Navy E-2C Hawkeye
- Multi-window application included terminal procedures, airport diagrams, enroute charts, DAFIF, CADRG, DTED, CIB, LANDSAT, and JTIDS traffic/intel.
- Flight tested at Fallon NAS, NV and then deployed globally.
- Endorsed and funded by Admiral Archie Clemins, CINCPACFLT
- Award presented to Navy sponsor by Bill Gates

# US SOCOM uses PI software for its wearable computer display

- We demonstrated System with aircraft at Hurlburt AFB, Florida.
- System used digital data messaging without the errors common in voice communication.

# PI Services to Industry

- **ARINC-424 Aeronautical Data**
- **Flight Management System format utilities**
- **Graphic Rendering Engines**
- **End User Applications**
- **Data Warehousing**
- **Web Distribution**
- **Commercial Customers include Honeywell, BAE, Litton and NASA.**

# PACMAN Initiative

- **18-month development under Air Expeditionary Force and Air Mobility Command Battlelabs.**
- **The Battlelab is a unique organization focused on rapidly introducing high payoff initiatives that:**
  - » Reduce mobility response time.
  - » Reduce deployment support structure.
  - » Increase deployed combat capability and effectiveness.

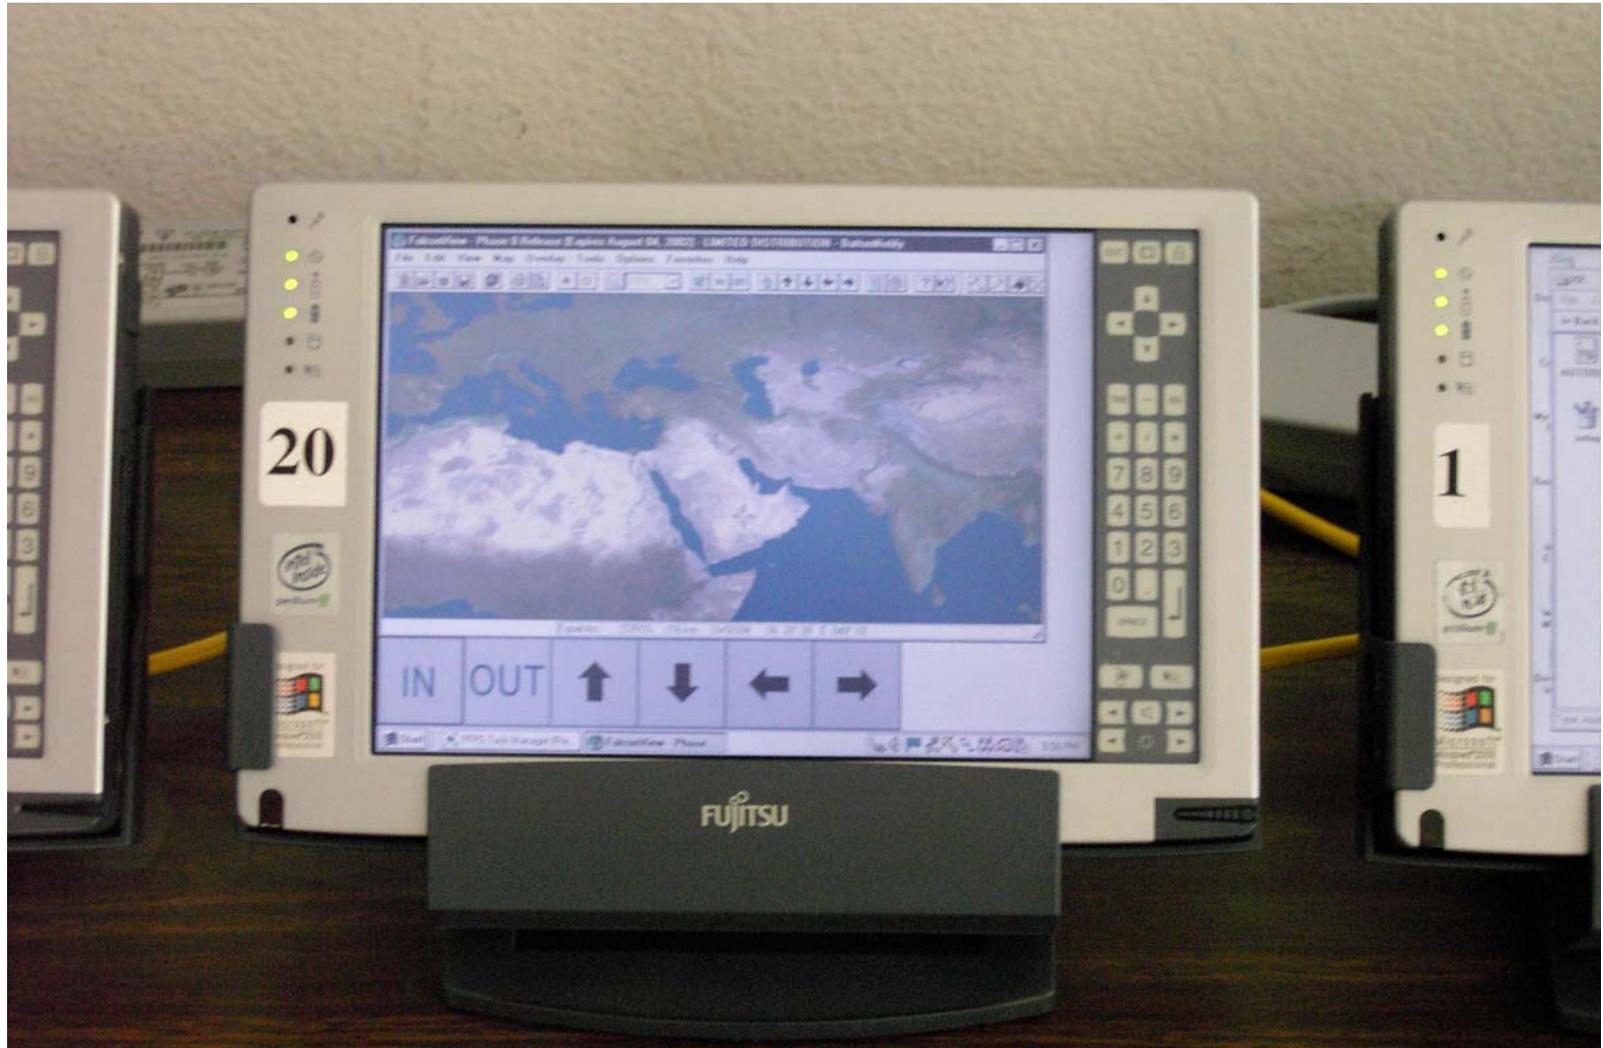

# Seymour Johnson F-15E Deployment Mar 02

# Ongoing PACMAN Flight Tests Scheduled

- **KC-135**
- **C-130**
- **B-2**
- **A-10**
- **Ground Users**
- **Others**

# PACMAN Display Device is a modified Pen Computer

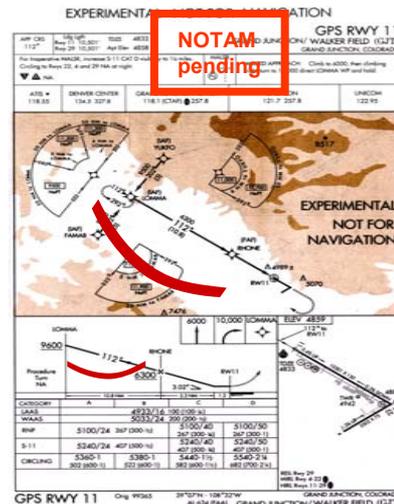

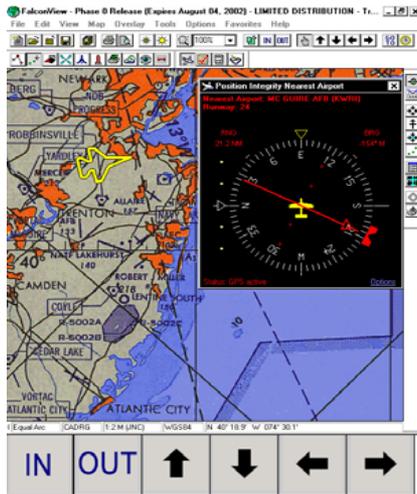

# The Complete Hardware Suite

- **PACMAN Pen Computer**
- **GPS Receiver (or interface to A/C nav)**
- **Multiple 2 ½-hour Batteries (or A/C power)**
- **Custom kneeboard case**
- **Data Modem**
- **Cabling to A/C Radio**
- **Custom cable bundles**
- **Map Server for Squadron**
- **Firewall/Router/Network Switch**

# Overview of PACMAN's 3 Initial Software Functions

- 1. GPS-Moving Map
- 2. Interactive aircraft checklists
- 3. Airport Terminal Procedures

## LEFT/RIGHT HYDRAULIC SYSTEM FAILURE

### If left system fails:

- 1a. FLAP EMER RETR – EMER RETR
- 1b. If landing gear is down, LAND GEAR circuit breaker – Pull.

### If pressure decreases:

2. SAS/Anti-Skid – Paddle OFF.
3. Pitch SAS – Leave OFF.
4. Yaw SAS switch (operable channel only) – Engage (if desired).
5. Anti-Skid switch – ANTI-SKID (if left hydraulic system is operable).
6. Monitor hydraulic pressure of operable hydraulic system, and land as soon as practical; if damage is confirmed or suspected, accomplish CONTROLLABILITY/STRUCTURAL DAMAGE (EE-19).

### Prior to landing:

7. Speedbrakes – As required.
8. Landing Gear Handle – DOWN.

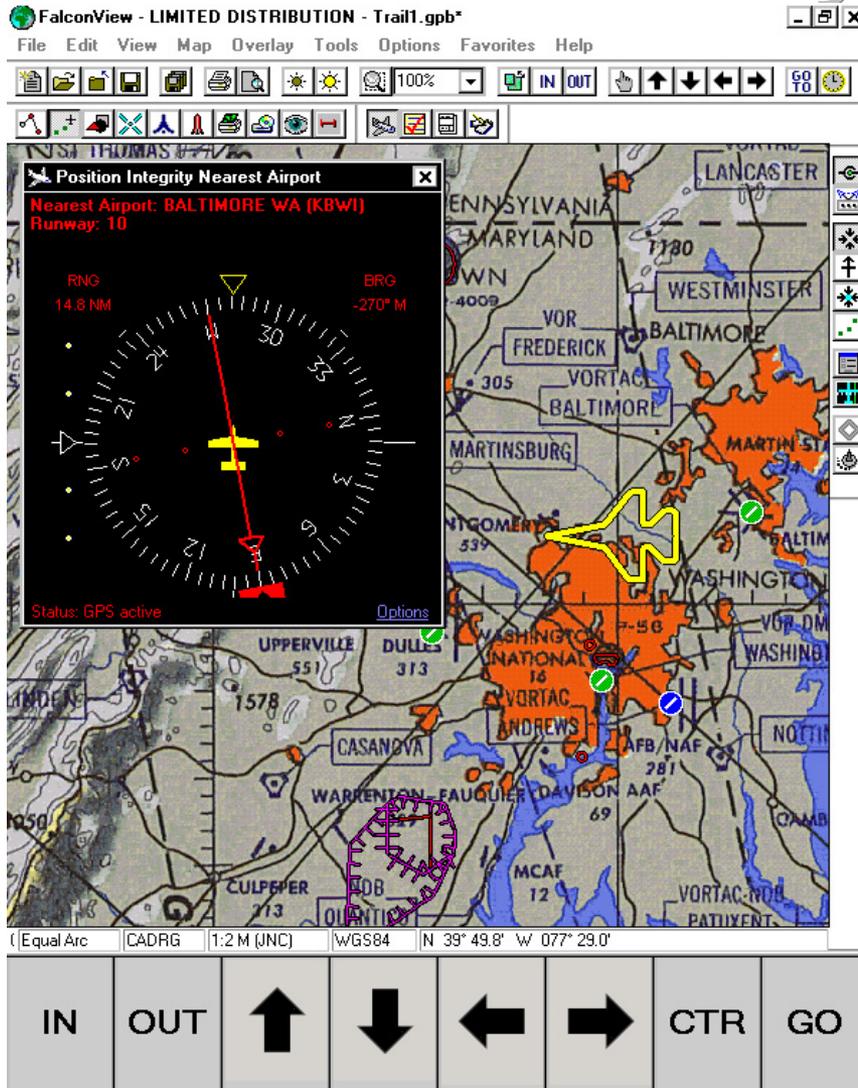

### If left hydraulic system has failed or LAND GEAR circuit breaker was pulled:

- a. AUX LG EXT handle – Pull.
  - b. AUX LG EXT handle – PUSH in (when landing gear indicates safe).
  - c. Emergency brake handle – Pull.
9. Flaps – As required.

### If both hydraulic systems fail: refer to DUAL HYDRAULIC SYSTEM FAILURE (EA-5).

END

# GPS-Based Moving Map enhances safety

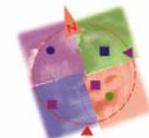

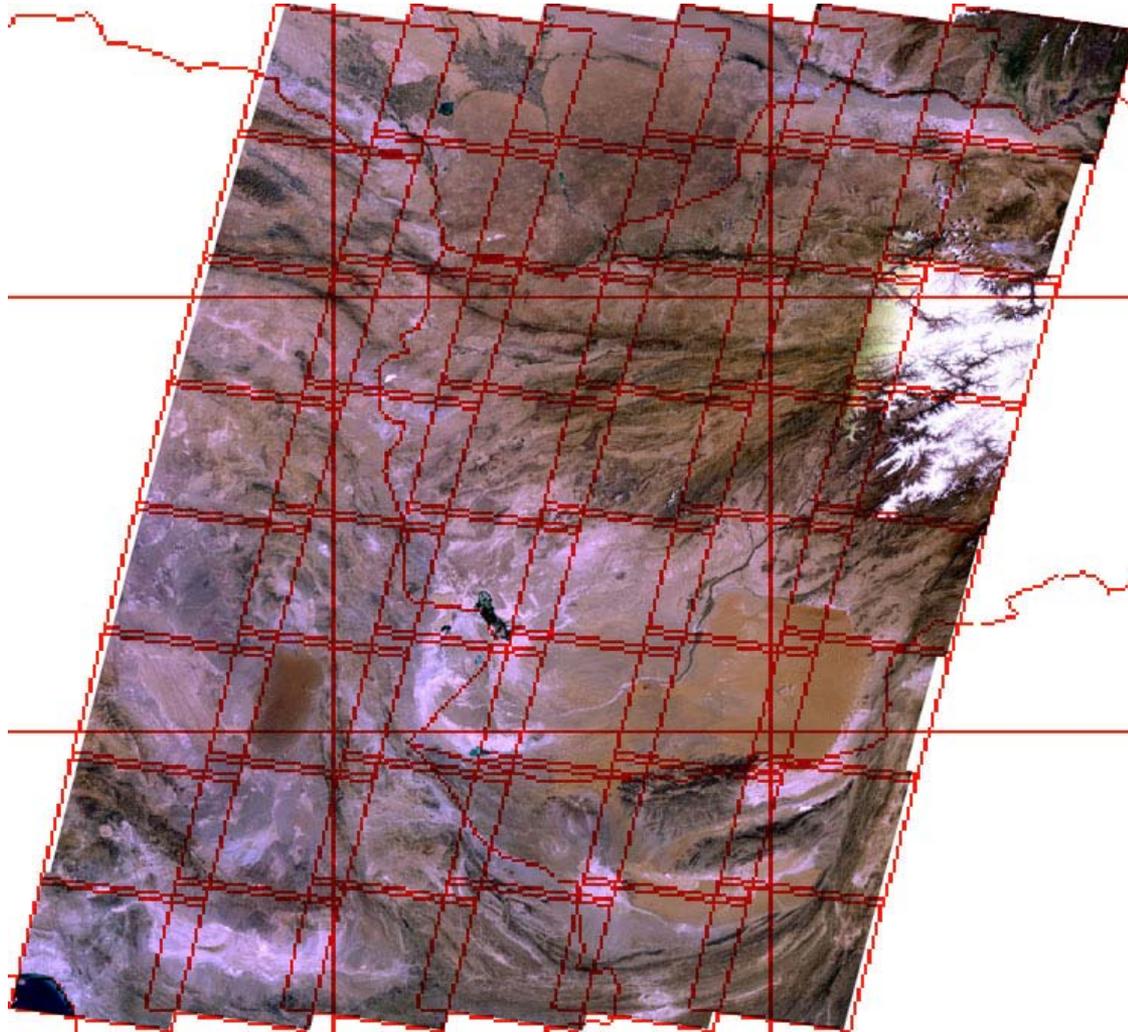

- NIMA Raster Charts for background
- DAFIF vector overlays (airports, SUAS, etc.)
- Own position updated in real time
- North up or track up
- Find Nearest Airport Function based on Aircraft's runway length requirement

# PACMAN Data Loads

<b>Data Type</b>	<b>NIMA Source</b>	<b>Other Source</b>
1. Maps	CADRG	PI GeoTIFF
2. Imagery	CIB	JPL, USGS GeoTIFF
3. Terrain	DTED	
4. Aeronautical	DAFIF	(SHP), NOTAMS
5. FLIP Text	PDF, { new }	
6. FLIP Enroute	{new}	PI GeoTIFF
7. FLIP TPs	{new}	PI PDF, GeoTIFF
8. Tech Pubs		PDF, SGML, XML
9. Weather		AF GeoTIFF
10. E-mail		PACMAN Network
11. Flight Plans		PFPS/JMPS
12. Pilot Custom		Scratchpad files

## PACMAN Rendering

**LEFT/RIGHT HYDRAULIC SYSTEM FAILURE**

**If left system fails:**

- 1a. FLAP EMER RETR - EMER RETR
- 1b. If landing gear is down, LAND GEAR circuit breaker - Pull

**If right system fails:**

1. SPD BK EMER RETR - EMER RETR

**If pressure decreases:**

2. SAS/Anti-Skid - Paddle OFF
3. Pitch SAS - Leave OFF
4. Yaw SAS switch (operable channel only) - Engage (if desired)
5. Anti-Skid switch - ANTI-SKID (if left hydraulic system is operable)
6. Monitor hydraulic pressure of operable hydraulic system, and land as soon as practical, if damage is confirmed or suspected, accomplish CONTROLLABILITY/STRUCTURAL DAMAGE (EF-19).

**Prior to landing:**

7. Speedbrakes - As required
8. Landing Gear Handle - DOWN

**If left hydraulic system has failed or LAND GEAR circuit breaker was pulled:**

- a. AUX LG EXT handle - Pull
- b. AUX LG EXT handle - PUSH in (when landing gear indicator safe)
- c. Emergency brake handle - Pull

9. Flaps - As required

**If both hydraulic systems fail: refer to DUAL HYDRAULIC SYSTEM FAILURE (EA-5).**

# Three-Dimensional Terminal Guidance

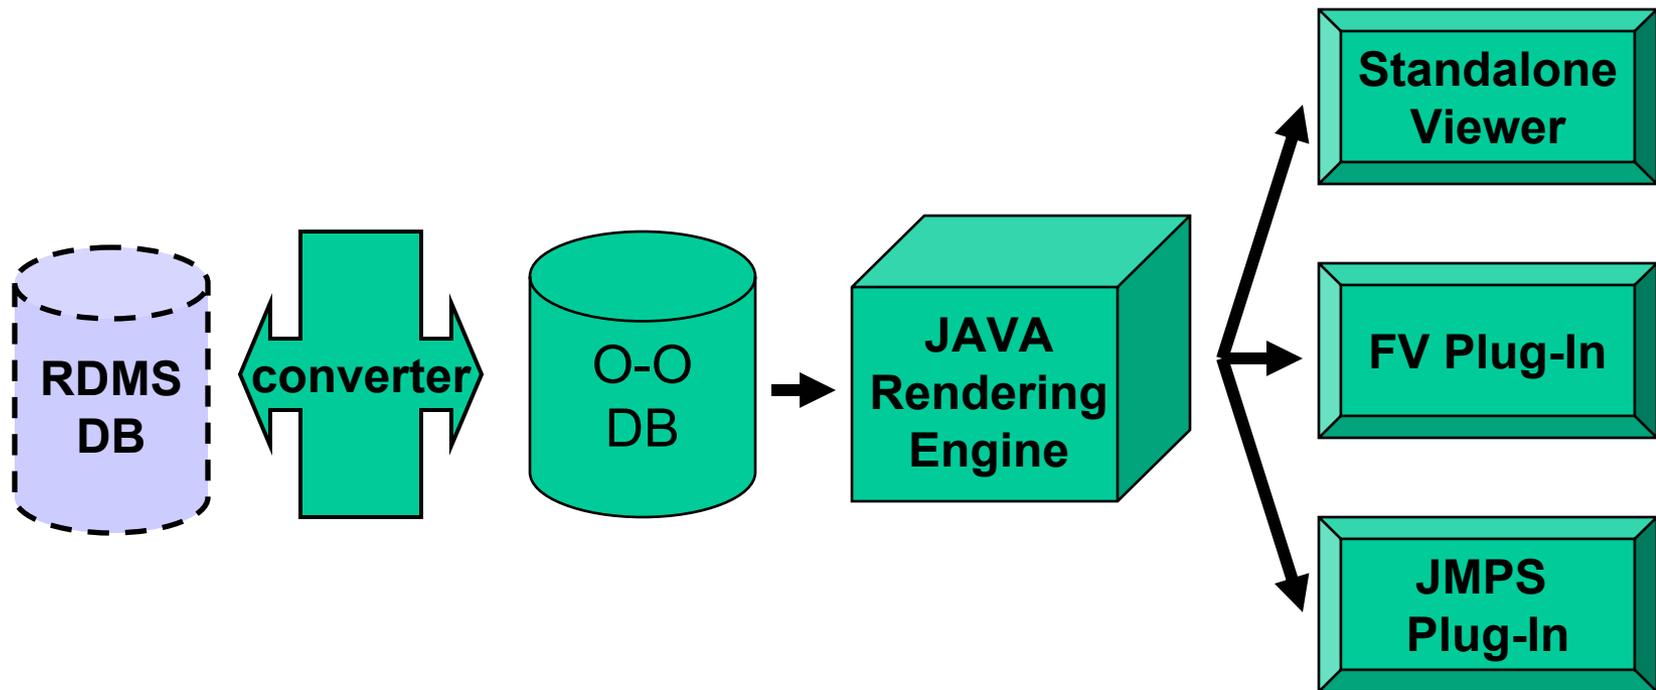

- We currently process 11,000 terminal charts per update in raster for General Aviation.
- Provide HTML hypertext linking of airports to procedures.
- PACMAN needs to accommodate new multicolor format.
- Must include NOTAM distribution mid-cycle.
- Vector Procedures planned by FLIP DWG for DAFIF Ed 8 (Summer 04) is not soon enough.
- Conducted TEM #1 with NIMA to accelerate.

# Advantages of Vector FLIP over scanned Raster charts

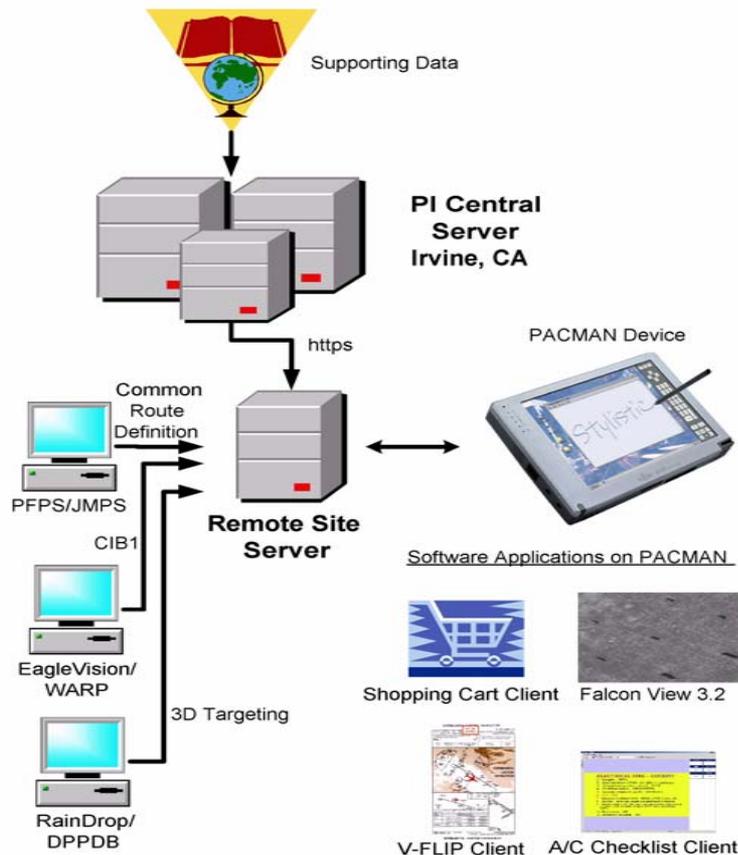

<u>Feature</u>	<u>Raster FLIP</u>	<u>Vector Flip</u>
Size	~300Kb	~3Kb
Quantity per 1Gb	3 volumes (i.e. NorthEast U.S.)	36 Volumes (all 20,000 procedures)
Intelligence	Dumb electronic page turner	Smart: can query all fields
GPS Moving Map	Plan View only within 5 NM range ring	Entire Plan View + Profile View
Features	All or nothing	Can toggle field on/off for selectable content
Rendering	Fixed Presentation	Variable for integration into many applications

# New Aeronautical Information Architecture

# PACMAN Device is supported by web-centric architecture

PACMAN System Architecture, Rev2

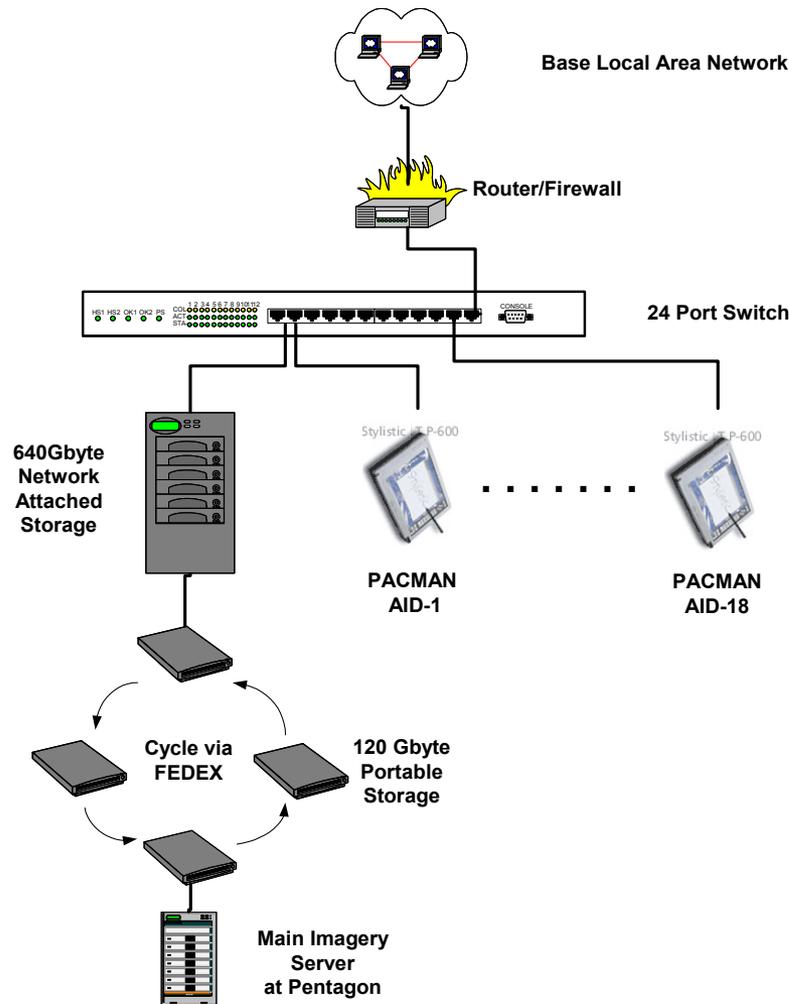

- PACMAN device is designed to operate autonomously in aircraft.
- Irvine- and Pentagon-based Central servers provide replenishment of current databases.
- Remote servers overcome bandwidth limitations at decentralized sites.
- PACMAN team installing the first prototype server.

# The next PACMAN Phases

- 1. Squadron-level Map Server**
- 2. New 3D**
- 3. Weather**
- 4. Messaging Network**
- 5. Traffic**

# Squadron-level Geospatial Product Library (GPL) Server

Squadron Imagery Server Architecture v1

# LandForm C3 scenes on PACMAN enhance 3D Perspective

# Remote Messaging for “John Madden” Overlay graphics

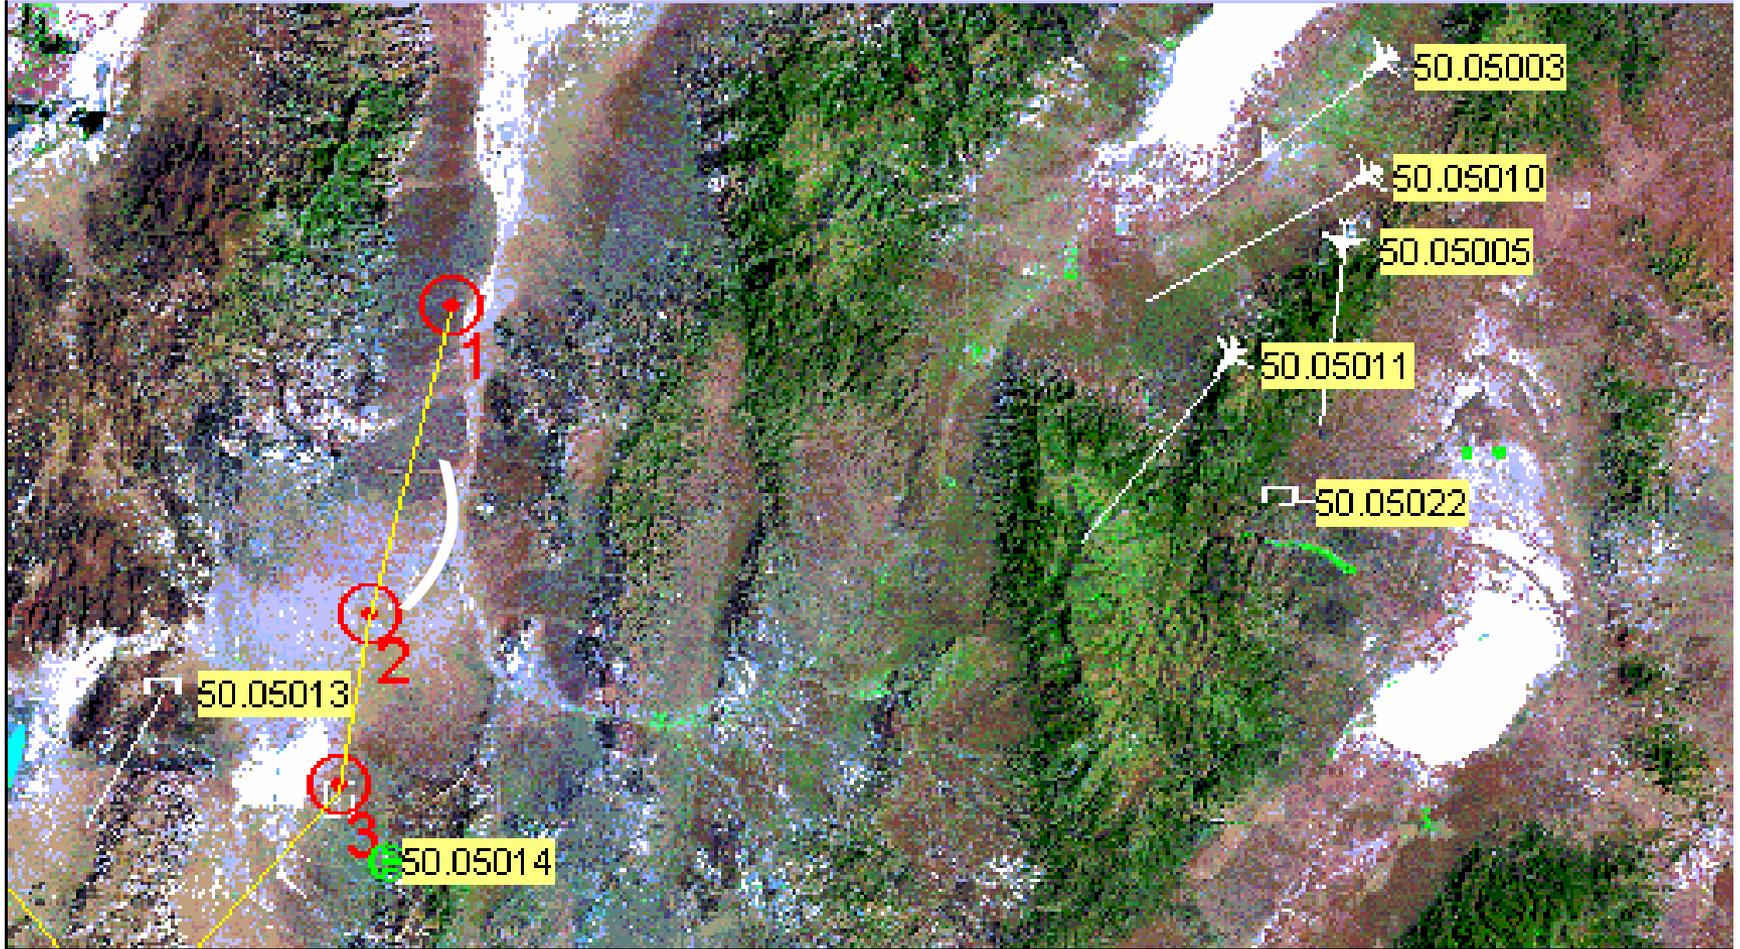

The screenshot displays the FalconView software interface. The title bar reads "FalconView - LIMITED DISTRIBUTION - ranger insertion.drw". The menu bar includes "File", "Edit", "View", "Map", "Overlay", "Tools", "Options", "Favorites", and "Help". The toolbar contains various icons for file operations, navigation, and map manipulation. The main map area shows an aerial view of a landscape with several overlays: a red circle highlighting a specific area, a green circle around it, a cyan outline of a structure, a yellow dashed line, and a white box labeled "SATCOM". Red arrows point from the text "Ranger Insertion Point" to the red circle. A status bar at the bottom of the map area displays: "Ground Speed: 000 Kts, 270° Mag, 1693 ft (MSL) Equal Arc CIB 1 meter WGS84 N 34° 33.863' E 069° 13.569' (5873 ft)". Below the map is a control panel with buttons for "IN", "OUT", four directional arrows (up, down, left, right), "CTR", and "GO".

# PACMAN Communications and Messaging Module

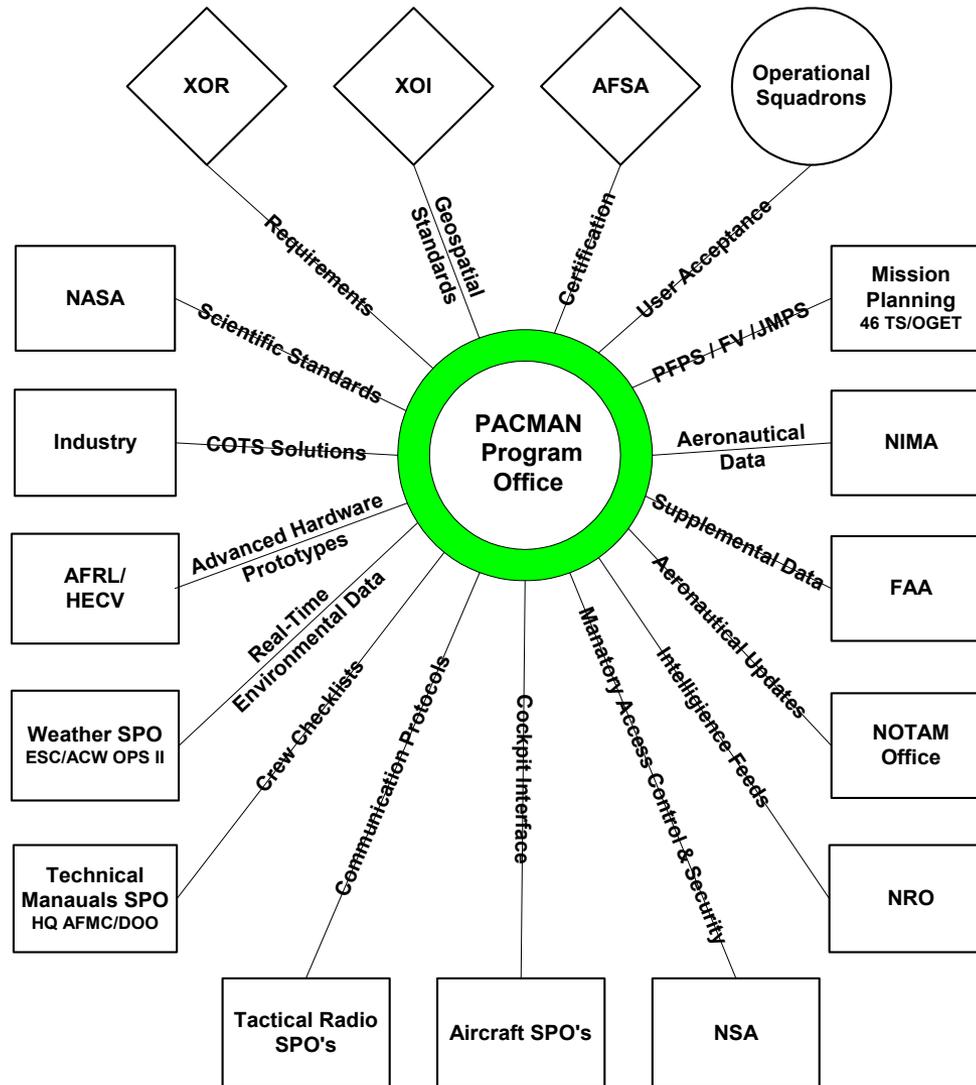

- **Transparent to user**
- **Asynchronous**
- **Bandwidth independent**
- **Point-to-Point or Multi-cast**
- **SATCOMs supported.**
- **Extensive list of radios and protocols.**

# Traffic Management from central feeds helps to manage busy skies

# The richness & complexity of the PACMAN Stakeholders

# PACMAN Demonstration
